CDC Webinar: Vaccinating Adults with Chronic Conditions

It is especially important for adults with chronic health conditions to be up-to-date on recommended vaccinations as they are at increased risk for complications from certain vaccine-preventable diseases. Especially in these challenging times, patients rely on healthcare professionals (HCPs) to advise them about important measures to protect their health—and an HCP recommendation is the strongest predictor of whether adults get vaccinated.

Week 19 (Week ending May 9, 2020).

Laboratory confirmed flu activity as reported by clinical laboratories remains low. Influenza-like illness activity continues to decrease and is below the national baseline. The percent of deaths due to pneumonia or influenza (P&I) is decreasing but remains elevated, primarily due to COVID-19, not influenza. Reported pediatric flu deaths for the season are high at 174.
