Webinar: Shared Clinical Decision Making – What’s a Clinician to Do?
Presenters will share the history of shared clinical decision making, the rationale behind changing immunization recommendations and how providers can approach this recommendation.

Thursday, May 14, 2020 from 12:00 – 1:00 pm MT (2:00 – 3:00 pm ET)

CDC Webinar: Vaccinating Adults with Chronic Conditions
It is especially important for adults with chronic health conditions to be up-to-date on recommended vaccinations as they are at increased risk for complications from certain vaccine-preventable diseases. Especially in these challenging times, patients rely on healthcare professionals (HCPs) to advise them about important measures to protect their health—and an HCP recommendation is the strongest predictor of whether adults get vaccinated.

United States

World
Laboratory confirmed flu activity as reported by clinical laboratories remains low. Influenza-like illness activity continues to decrease and is below the national baseline. The percent of deaths due to pneumonia or influenza (P&I) is high but the increase is due primarily to COVID-19, not influenza. Reported pediatric flu deaths for the season are high at 170.

- Clinical lab: 0.2% of specimens positive for influenza virus
- Public health lab: A(H1N1)pdm09 viruses are now the most commonly reported.
